## Multiplication Movement

### Ready

**You will need:**

- number cards
- paper and pencil
- 1 number cube
- 2 index cards

3	.	8	4	6
---	---	---	---	---

### Set

Draw a decimal point on each index card. Give each player 1 decimal point card. Shuffle the number cards and deal each player 4 number cards face down.

### Go!

- 1 Have players place the decimal point in front of them, turn over their number cards, and form a decimal with 1 digit to the left of the decimal point and 3 digits to the right of the decimal point.
- 2 Toss the number cube.
- 3 Use the number on the number cube and multiply it by the decimal created. Players compare their products. Each player may switch 2 cards in her or his decimal to try to make the product larger.
- 4 Re-multiply the new decimals with the same number tossed on the number cube. The player with the largest product wins.
